**DETAILED ACTION**

***Election/Restrictions***

1. The previous restriction requirement has been withdrawn and a new restriction is set forth below.
2. This application contains claims directed to the following patentably distinct species of the claimed invention:

Species of manufacturing a MEMS device:

A1. A hole completely through the substrate after the step of providing a MEMS device on a first side of a substrate.

A2. A MEMS device formed on substrate after bonding a wafer to the substrate and finish forming a hole completely through the substrate after the step of thinning.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claims are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include

all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.
